IBM Internship

Resume Builder Pro

An Advanced Web-Based Resume Creation Platform

Student Name: Divesh Raj

College ID: 23TEC2CS487

Institute: Vivekananda Global University, Jaipur

Project Type: IBM Final Internship Project

Web Technologies | HTML | CSS | JavaScript | Local Storage API

Project Overview

🎯Objective

Resume Builder Pro is a fully client-side web application that enables students and professionals to create, customize, and download industry-standard resumes. Built using core web technologies — HTML, CSS, and JavaScript — the tool eliminates the need for any backend infrastructure while delivering a rich, interactive user experience.

🛠️ Tech Stack

HTML5 • CSS3 • Vanilla JavaScript
LocalStorage API • html2pdf.js

👥 Target Users

Engineering Students
Job Seekers & Freshers
Professionals & Interns

🌐 Deployment

Fully Offline / Browser-Based
No server required
Works on any modern browser

Key Features

🔐User Authentication

Signup/Login system with localStorage-based user management. Session persistence across browser reloads.

🎨4 Resume Templates

Classic, Modern, Creative & Minimal layouts. Each with distinct typography and color schemes.

📸Photo Upload

Drag & drop or browse to upload profile photo. Live preview update with remove option.

📊Skills with Progress Bars

Interactive range sliders to set skill proficiency (0–100%). Visual bar rendered live in preview.

💾Save & Load Resumes

Multiple resumes saved per user in localStorage. Load, rename or delete saved resumes anytime.

📥PDF Download

One-click PDF export using html2pdf.js. High-fidelity rendering of the live preview.

System Architecture & Technical Design

USER INTERFACE LAYER

- HTML5 Semantic Structure
- Responsive CSS Grid/Flexbox
- Auth Modal + App Container

LOGIC LAYER (JavaScript)

- Authentication Engine
- Dynamic Form Generator
- Live Preview Renderer
- Template Switcher & Color Picker

DATA LAYER

- localStorage (Users + Resumes)
- Session Management
- JSON Serialization

OUTPUT LAYER

- html2pdf.js PDF Export
- Zoom Controls
- Multi-template Renderer

Core Modules —

- Auth System
- Dynamic Forms
- Live Preview Engine
- Template Manager
- PDF Exporter
- Resume CRUD

Resume Sections & Functionality

📋 Resume Sections Supported

- 👤 Personal Information (Photo, Name, Roll No, Email, Phone)
- 🎓 Education (Degree, Institute, Board, CGPA, Year)
- 💻 Skills with Interactive Progress Bars (0–100%)
- 💼 Work Experience (Company, Role, Duration, Location)
- 🚀 Projects (Name, Tech Stack, Links, Description)
- 🏆 Achievements (Title + Description)
- 📜 Certifications (Name + Issuing Organization)

⚙ Additional Capabilities

- 🔍 Real-time live preview with zoom (50%–150%)
- 🎨 Custom theme color picker for branding
- 🖼️ Profile photo upload with preview & remove
- 📑 Multiple resume save/load per account
- 🗑️ Add/remove dynamic form items on the fly
- 📱 Responsive design for desktop & tablet
- 🔒 Secure local auth — no external API needed

Implementation Highlights

🔐 Authentication with localStorage

Users stored as JSON array in localStorage
Password match on login · Session via currentUser key
Auto-login on page reload if session exists

⚡ Live Preview Engine

updatePreview() triggered on every input event
collectFormData() reads all form fields dynamically
HTML injected directly into #resumePreview div

📊 Dynamic Skills with Range Slider

HTML range input (min=0, max=100, default=75)
updateSkillLevel() updates percentage display live
CSS progress bars rendered proportionally

📥 PDF Export

html2pdf.js converts #resumePreview to PDF
Custom margins, scale and image quality settings
Single-click download with formatted filename

~600 Lines HTML	~900 Lines CSS	~700 Lines JS	7 Resume Sections	4 Templates	3 File Formats

Learning Outcomes & Conclusion

01 Real-World App Dev

Built a fully functional multi-page SPA with no framework dependencies.

02 DOM Manipulation

Mastered dynamic HTML generation, event listeners, and live DOM updates.

03 Data Persistence

Implemented CRUD operations on localStorage as a client-side database.

04 UX/UI Design

Designed responsive layouts with multiple templates and theme customization.

05 PDF Generation

Integrated third-party library (html2pdf.js) for document export.

06 Problem Solving

Handled authentication flow, file reading, and zoom controls end-to-end.

This project demonstrates how modern web technologies can build enterprise-grade tools with zero backend infrastructure.
